PROFILE

Senior AI engineer and product owner at Deriv, leading applied AI products from scope and architecture through launch and iteration. Builds tool-using agents, retrieval systems, real-time platforms, and measured lifecycle workflows with lean engineering teams and cross-functional partners.

EXPERIENCE

Deriv | AI Engineering (now Senior AI Engineer / Applied AI Product Lead) | Feb 2025 - Present

Lead product direction and engineering delivery for customer-facing market intelligence and internal growth platforms. Delivered most of TradersView with a core team of approximately 2-3 engineers, supported by product leaders and domain experts.

- **TradersView / SatoriX:** Scaled real-time market intelligence to **500K unique visitors and over 1M all-time visits**; combined live prices, interactive charts, technical indicators, market news, and AI-generated insights. Reported engagement reached **21.4% returning visitors** and **3m 14s average session duration**.
- Expanded instrument-level news coverage from **4 to 53 instruments (13.25x)** through Cur8 integration, standardized mappings, and automated archival and retrieval. Built on Next.js, FastAPI, WebSockets, Redis, and Kubernetes.
- **Praxis:** Owned AI-assisted lifecycle targeting across demo-to-real, real-to-deposit, and deposit-to-trade journeys. In the reported week, the program generated **1,086 conversions**; selective targeting increased conversions per 1,000 sends from **19 to 59**, while reducing sends **69%** and retaining **95%** of the previous week's conversion volume.
- Linked **394 conversions** to nearby opens, clicks, or logins and launched Jamaica content A/B tests to evaluate AI-generated messaging. Combined deterministic eligibility and content checks with LangGraph agents, retrieval, cohort analysis, and statistical testing.
- **TriggerHub API:** Automated cohort checks, audience preparation, content drafts, and CRM handoffs, freeing an **estimated 8-18 staff-hours per week**. Added operator approvals, recipient-level status, duplicate prevention, and bounded AI workflows using FastAPI, PostgreSQL, Celery, Redis, LangGraph, and vector search.

Brio Tech | Software Engineering Intern | Jul 2024 - Aug 2024

- Built cloud pricing and AI-assisted sales tools using Python, Streamlit, Azure APIs, and GPT-4; the lead generation application automated a reported **80%** of the process and increased sales productivity **40%**.

PropReturns | Full Stack Developer & Data Science Intern | Jun 2023 - Aug 2023

- Built a Python data pipeline for scraped real-estate data, an OpenCV image processing app, and reusable UI components; image preprocessing time fell **50%**.

TECHNICAL SKILLS

Applied AI: Tool-using agents, sandboxed execution, retrieval-augmented generation, vector search, LangGraph, evaluation and A/B testing

Engineering: Python, TypeScript, SQL, Next.js, React, FastAPI, Pydantic, WebSockets, PostgreSQL, Redis, Celery, Kubernetes, Docker, BigQuery

Product: Product ownership, technical leadership, lifecycle targeting, cohort analysis, experimentation, cross-functional delivery

EDUCATION & LEADERSHIP

B.E., Computer Science, BITS Pilani, Dubai Campus | 2025

Lead, Google Developer Student Clubs | 2023 - 2024

Led a 26-person team across five departments; grew the campus community to 350+ members and supported 903+ student participations and certifications.
